

Aapki Factory ka System — Kya, Kyun, Kaise

Ye guide bina technical jargon ke samjhaati hai ki system ka har hissa kya karta hai, aapke business ko kyun chahiye, aur roz ke kaam mein kahan lagta hai. Saath mein aage kya add hona baaki hai.

Taiyaar: 29 Aug 2026 Chhoti se mid manufacturing company ke liye

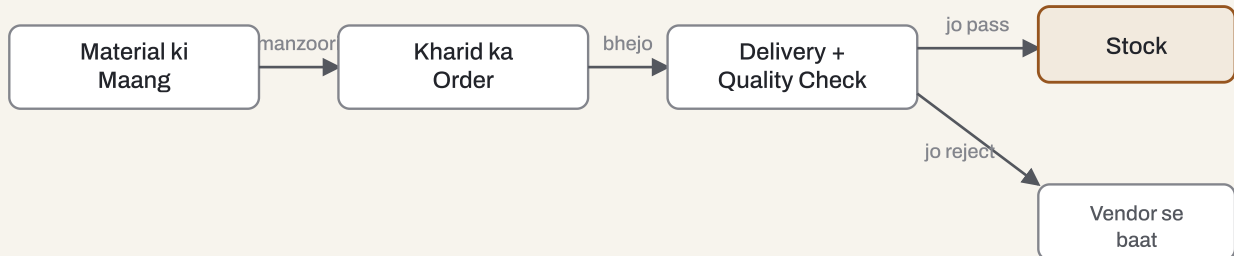

1 Poori Kahani Ek Nazar Mein

System aapki factory ke "material ki poori zindagi" ko sambhaalta hai — material maangne se le kar, kharidne, quality check ke saath receiving, sahi lagat ke saath stock, phir production, finished maal, aur bechne tak. Saath mein vendor ko paisa aur GST.

2 Kharid ka Hissa

MATERIAL MAANGNA → ORDER → RECEIVING

Har delivery ki alag receiving entry banti hai. Sirf pass hua maal stock mein jaata hai.

Material ki Maang

KYA HAI	Factory ke andar koi bhi — store keeper, production incharge — "mujhe itna material chahiye" ki parchi daalta hai. Manager haan/naa karta hai. Haan hone par order ki draft copy apne aap ban jaati hai.
KYUN CHAHIYE	Kuch bhi kharidne se pehle ek manzoori ka step. Bina iske har koi apne mann se vendor ko order de de — paisa aur control dono haath se nikal jaate hain.
KAHAN / KAB	Sabse pehla step. Jab kisi ko lage stock kam pad raha hai.

EXAMPLE

Welding shop wale ne dekha rod khatam ho raha hai → 50 kg ki maang daali → manager ne approve kiya → order ki draft copy taiyaar.

Kharid ka Order

KYA HAI	Vendor ko bheja jaane wala pakka order. Ek hi cheez ke liye 2–3 vendors ke rate mangwa ke compare kar sakte ho, sabse achha chun lo — uske rate order pe apne aap lag jaate hain. Order ka PDF ban ke vendor ko email chala jaata hai.
KYUN CHAHIYE	Vendor kaunsa aur kis rate pe — sab likhit record. Baad mein "itna maal aana baaki hai" isi order ke against dikhta hai.
KAHAN / KAB	Maang approve hone ke baad. Purchase department banata hai.

EXAMPLE

Steel rod ke liye 3 vendors — A ₹95/kg, B ₹98, C ₹92. C chuna → uska rate order pe lag gaya, order C ko email ho gaya.

Maal ki Receiving + Quality Check

KYA HAI	Jab vendor ka maal aata hai, har delivery ki ek receiving entry banti hai. Har item pe likhte ho: kitna aaya, kitna theek nikla, kitna kharab . Sirf theek wala maal stock mein jaata hai. Kharab wala reason ke saath record ho jaata hai.
KYUN CHAHIYE	Pehle jitna aaya poora stock mein chadh jaata tha — kharab maal bhi. Ab quality check ka step hai: 100 aaye, 92 pass, 8 reject. Reject ka record vendor se baat karne ke liye rehta hai.
KAHAN / KAB	Jab vendor ka truck aata hai. Store keeper entry karta hai, quality wala pass/fail decide karta hai.

EXAMPLE

100 rod order the, 100 aaye, 12 tede-mede nikle → 88 stock mein chadhe, 12 "rejected — bent" note ho gaye. Vendor ko batao ya agle bill mein adjust karo.

3 Stock aur Lagat

Sahi Lagat — Apne Aap Average Cost

KYA HAI	Har item ki asli khareed lagat system khud nikaalta hai. Jab bhi naya stock alag rate pe aata hai, purani aur nayi lagat ka average ho ke item ki cost update ho jaati hai.
KYUN CHAHIYE	Pehle system item ki <i>bechne wali</i> keemat ko hi lagat maan raha tha — galat. Isse production ki lagat aur stock ki value dono galat aati thi. Ab jo actual paisa diya, wahi lagat.
KAHAN / KAB	Automatic — maal receive hone par, production poori hone par.

EXAMPLE

10 kg rod @ ₹50 pehle se the (₹500). 10 kg @ ₹70 naye aaye (₹700). Ab 20 kg, item ki cost ₹60 — production isi ₹60 pe cost lagayega.

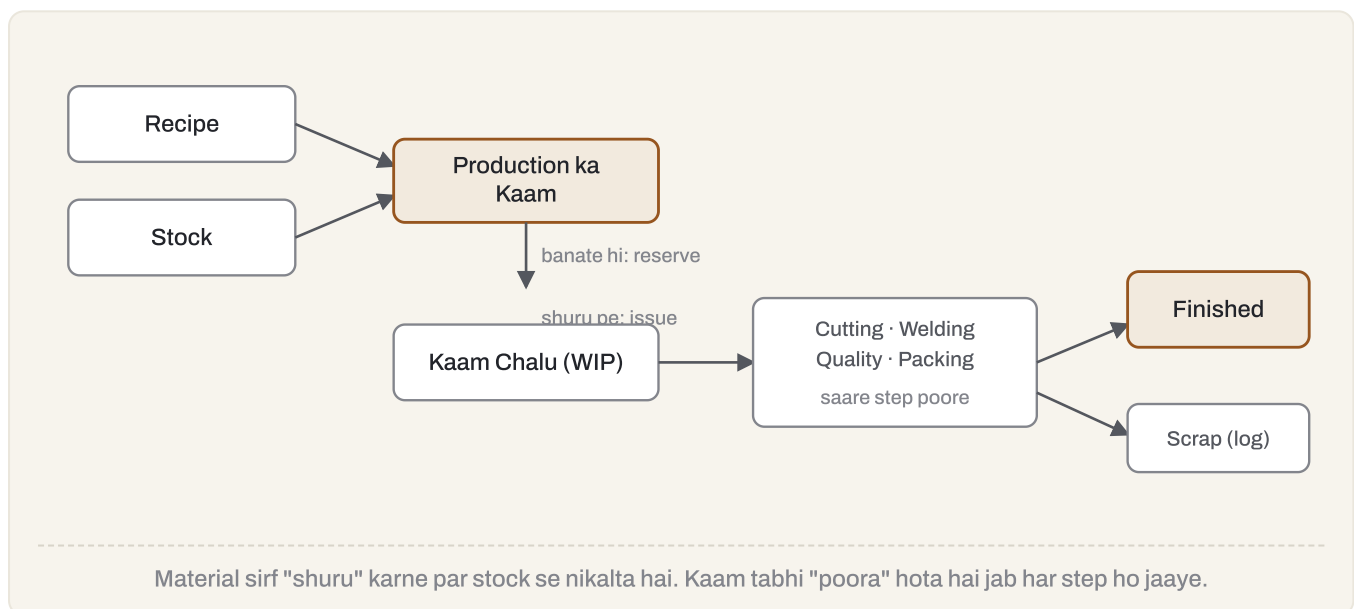

Batch aur Expiry Tracking

KYA HAI	Jab bhi stock aata hai, ek "batch" (lot) banta hai — batch number, aane ki date, aur agar lagu ho to expiry date. Use karte time sabse pehle expire hone wala batch pehle nikalta hai.
KYUN CHAHIYE	Traceability — kaunsa lot kis order mein gaya. Aur chemical / food / dawai jaise items ki expiry manage hoti hai. Expiry paas aane par manager ko alert.
KAHAN / KAB	Automatic har baar stock aane / jaane par.

Kam Stock ki Chetavani

KYA HAI	Har item pe ek minimum level set karo. Stock us level pe pahunchte hi manager ko notification. Ek click pe wahin se material ki maang bhi ban jaati hai — banne wale product ke liye uske saare raw material apne aap suggest ho jaate hain.
KYUN CHAHIYE	Stock khatam hone se production ruk jaati hai. Ye pehle hi bata deta hai.
KAHAN / KAB	Har sale / consumption ke baad check hota rehta hai.

4 Production ka Hissa

Recipe / Samagri List

KYA HAI	Har banne wale product ke liye "ek piece banane mein kya-kya lagta hai" ki list — raw material aur kitni quantity.
KYUN CHAHIYE	Production planning, material calculation aur lagat — sab isi list pe khade hain.
KAHAN / KAB	Product setup ke time ek baar. Har production kaam isi ko use karta hai.

EXAMPLE

Ek Steel Chair = 5 rod + 1 cushion + 8 screw. 10 chair ka kaam → 50 rod, 10 cushion, 80 screw chahiye.

Production ka Kaam

KYA HAI	Ek production job — "10 Steel Chair banao". System check karta hai material poora hai ya nahi, banne par raw material stock se kat jaata hai aur finished chair stock mein aa jaati hai. Lagat aur munafa dono dikhta hai.
KYUN CHAHIYE	Production track karne ki central cheez — kya ban raha hai, kaun laga hai, kitni lagat, faayde ka sauda hai ya nahi.
KAHAN / KAB	Jab production planner decide karta hai ki ek batch banana hai.

Material Rok lena + Kaam Chalu

KYA HAI	Kaam banate hi uska material "reserve" ho jaata hai — physical stock nahi hilta, bas "available" kam dikhta hai taaki doosra kaam usi material pe plan na ho. Kaam "shuru" karte hi material shop floor pe issue ho jaata hai (stock se nikal jaata hai). Ab kaam chalu hai — material gaya, product abhi nahi bana.
KYUN CHAHIYE	Pehle material sirf kaam poora hone par katta tha. Do kaam dono possible dikhte the, phir ek material kha leta, doosra atak jaata. Ab reservation ye jhagda pehle hi khatam karta hai.
KAHAN / KAB	Reserve — kaam banate hi. Issue — "Start" button dabate hi. Kaam cancel karo to material wapas stock mein aa jaata hai.

EXAMPLE

2 chair ke kaam plan kiye, dono ko 50 rod chahiye, stock 60.
Reservation ke baad doosra kaam saaf dikhata hai "sirf 10 rod available" — pehle hi pata chal jaata hai, production floor pe surprise nahi.

Production ke Steps

KYA HAI	Ek kaam ke andar steps — Cutting → Welding → Quality Check → Packing. Har step pe kaun laga hai, kab shuru/khatam. Kaam tabhi "poora" hota hai jab saare steps ho jaayein.
KYUN CHAHIYE	Pehle ek hi status tha. Multi-step production mein pata nahi chalta job kahan atki hai, kis step pe time laga.
KAHAN / KAB	Steps optional hain — simple product ke liye chhod do, ek hi step jaisa chalega.

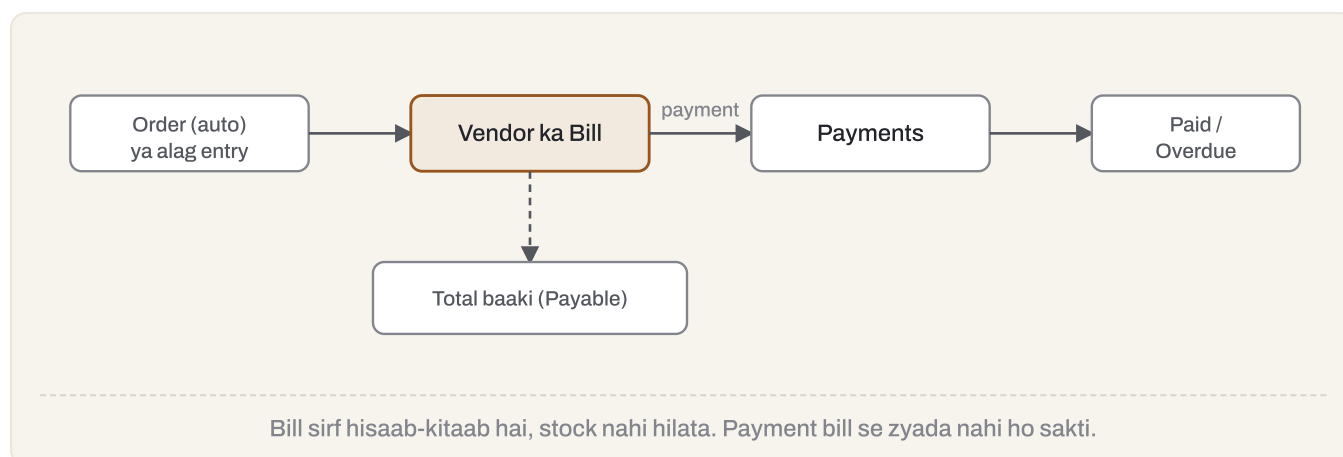

Reject / Wastage (Scrap)

KYA HAI	Kaam poora hote time daalte ho: kitne theek bane, kitne kharab (scrap), aur kyun. Sirf theek wale finished stock mein jaate hain.
KYUN CHAHIYE	Pehle 10 ka kaam hamesha exactly 10 deta tha. Asli production mein rejection hoti hai. Poore kaam ki lagat theek units pe baant jaati hai — scrap se per-piece lagat badh jaati hai, jo sahi hai.
KAHAN / KAB	Kaam complete karte time.

EXAMPLE

10 planned, material lagat ₹3000. Agar 2 scrap ho gaye → $₹3000 \div 8$
theek units = ₹375 per piece (bina scrap ke ₹300 hota). Sahi cost tabhi
dikhenga jab scrap count ho.

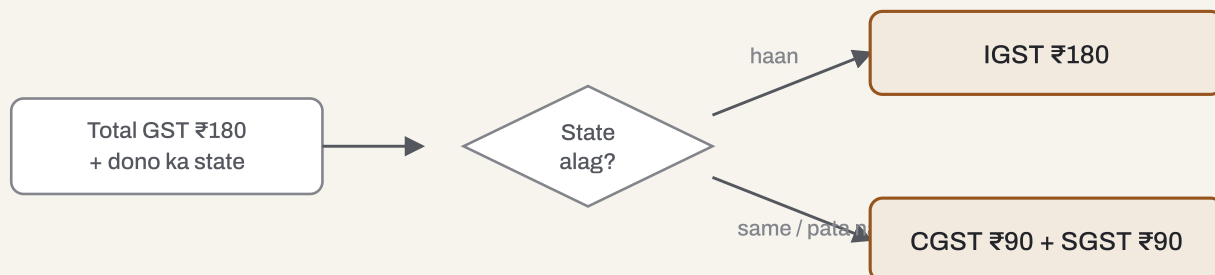

5 Vendor ko Paisa

Vendor ke Bill aur Payments

KYA HAI	Jaise customer ko invoice bhejte ho, waise vendor ka bill yahan enter hota hai. Order se apne aap bhar jaata hai ya alag se. Payment record karo — kitna diya, kitna baaki. Overdue bill alag rang mein. Vendor pe payment terms (kitne din ka udhaar) aur bank details.
KYUN CHAHIYE	Pehle purchase side ka paisa track hi nahi hota tha — vendor ko kitna dena hai, kya diya, kya late ho gaya. Ab poora hisaab.
KAHAN / KAB	Jab supplier ka invoice aata hai. Order page se seedha bill bana sakte ho.

6 GST — Apne Aap Sahi

Same state = CGST + SGST aadha-aadha. Doosra state = poora IGST. Agar state ya GST number diya ho to system khud pehchaan leta hai.

GST Split (CGST / SGST / IGST)

KYA HAI	Har bill/invoice pe GST apne aap sahi tarike se banta hai. Same state mein bech rahe ho → CGST + SGST (aadha-aadha). Doosre state mein → IGST (poora). "Place of supply" apne aap set ho jaata hai.
KYUN CHAHIYE	Pehle ek flat GST line thi — GST rules ke hisaab se sahi invoice nahi tha. Ab compliant hai, invoice PDF pe proper breakdown.
KAHAN / KAB	Automatic har bill/invoice save pe.

EXAMPLE

Karnataka ki company Karnataka mein bech rahi → CGST ₹90 + SGST ₹90. Wahi company Tamil Nadu mein bech rahi → IGST ₹180.

7 Aage Kya Add Hona Baaki Hai

Ye cheezein abhi system mein nahi hain. Har ek ke saath: matlab kya, asli example, aur kaunsi company ko chahiye.

1 Product ke andar Product (Multi-level Recipe)

Abhi recipe ek level ki hai: product → raw materials. Agar koi raw material khud banaya jaata hai (uski apni recipe hai), to system usko nahi samajhta.

EXAMPLE — STEEL ALMIRAH

Almirah = **Door Assembly** + **Frame Assembly** + Lock. Aur Door Assembly khud = Steel Sheet + Hinge + Handle. Abhi tumhe Door aur Frame ke alag kaam manually banane padte hain, phir Almirah ka. System nahi kehta "pehle 2 sub-part banao".

Kaun: Chhoti company — shaayad nahi. **Mid company** — **zaroori**. Furniture, electrical panel, machinery, pump, auto-parts — inme multi-level recipe aam baat hai.

2 Sab Kaam ka Combined Material Plan

Reservation ke baad "available" to dikhta hai, par ek jagah "saare pending kaam mila ke kitna material chahiye, kitna kam hai" — ye plan nahi banta.

EXAMPLE — 5 PENDING KAAM

Sab mila ke 267 kg rod chahiye, stock 100 kg → ek screen batata "167 kg kam hai" aur ek click pe ek consolidated maang bana deta. Abhi ye har kaam alag dekh ke khud jodna padta hai.

Kaun: Chhoti — nahi (1–2 kaam, dimag mein ho jaata hai). **Mid** — **bahut kaam ki cheez**. 10–50 kaam khule hon to purchase team ka roz ka kaam hai. Bina iske ya to zyada kharid lete hain (paisa block) ya production rukti hai.

3 Order pe Approval Limit

Maang pe manzoori hai, order pe nahi. Jiske paas order banane ki permission hai wo bade se bada order bhej sakta hai bina kisi review ke.

EXAMPLE

₹5,000 tak — executive khud. ₹5,000–50,000 — manager ki manzoori.
₹50,000+ — director. Abhi ye limit system mein nahi hai.

Kaun: Chhoti — nahi (owner sab dekhta hai). **Mid — haan.** Purchase team badi ho to audit aur budget control ke liye chahiye. Chhota feature hai.

4 Vendor ki Performance Report

Receiving ka data ab store hota hai (kitna aaya, kitna reject, time pe aaya ya nahi), par vendor-wise score-card nahi.

EXAMPLE

Vendor A — time pe 92%, reject 2%. Vendor B — time pe 71%, reject 8%.
Isse pata chalta B se bacho chahe rate sasta ho. Abhi ye data hai par ek jagah dikhta nahi.

Kaun: Chhoti — nahi (3–4 vendors, sab yaad). **Mid — bahut useful.** Data pehle se hai, sirf ek report banani hai — achha faayda kam mehnat mein.

5 Debit Note (Vendor ko wapas claim)

Receiving pe reject qty note hoti hai, par vendor ko formal document nahi jaata.

EXAMPLE

100 rod @ ₹100 mangaaye, 15 kharab. Vendor ne poore 100 ka bill (₹10,000) bheja. Tumhe ₹1,500 ka Debit Note banana chahiye — "itna kam denge" ya "agle bill mein adjust".

Kaun: Chhoti — nahi (phone pe adjust). **Mid — haan.** GST ke hisaab se ek official document hai, accounts reconciliation ke liye.

6 Ek Maang → Kai Vendor ke Order

Ek approved maang se ek hi order banta hai. Maang ke items alag-alag vendor se nahi mangwa sakte.

EXAMPLE

Maang mein: Rod, Paint, Bolt. Rod Vendor A se sasta, Paint B se, Bolt C se. Abhi teen alag order manually banane padenge aur maang se link toot jaata hai.

Kaun: Chhoti — workaround chal jaata hai. **Mid — haan.** Har material ka alag preferred vendor hota hai.

7 Har Piece ka Serial Number

Abhi lot/batch level tracking hai. Har individual piece ka apna number, warranty, service history — nahi.

EXAMPLE — GENERATOR COMPANY

Customer: "Generator SN-2026-0453 kharab hai." System se pata chale: kaunse kaam mein bana, kaunse parts (unke serial), kaunsa customer, kab bika, warranty valid hai ya nahi. Batch se ye nahi milta — batch mein 50 the.

Kaun: Chhoti — nahi. Mid — sirf high-value / warranty wale saamaan (generator, machine, electronics, pump, engine). FMCG / hardware / consumable wali company ko bhi nahi.

8 Kai Godown / Location ka Stock

Abhi har item ka ek total number. Kaunsa maal kaunse godown / rack mein hai — nahi.

EXAMPLE

Rod total 500 kg = Pune factory 300 + Mumbai warehouse 200. Mumbai se dispatch karte time system "500 available" dikhata hai, actual wahan 200. Godown ke beech transfer track nahi hota.

Kaun: Chhoti — nahi (factory hi store hai). Mid — sirf agar sach mein kai branches / warehouses ho. Ye bada change hai — sirf demand aane par banao.

8 Kis Company ko Kya Chahiye

HISSA	CHHOTI COMPANY (1-15 LOG, 1 JAGAH)	MID COMPANY (15-150 LOG)
Maang / Order / Receiving	Maang skip kar sakte ho; order + receiving direct	Poora chain — maang manzoori, vendor rate compare, quality check
Lagat aur batch	Auto average cost + kam stock alert kaafi	Wahi + stock value ki report
Production	Recipe + simple kaam; steps optional	Steps, material reservation, scrap tracking
Vendor payment	Bill + payment record	Bill + payment + (aage) approval limit
GST	Auto CGST+SGST (zyadatar local sale)	CGST+SGST aur IGST dono
Multi-level recipe / combined plan	Aam taur pe nahi	Haan, zaroori

Nichod: Jo abhi bana hai, wo ek chhoti se mid manufacturing company ke liye poora kaam karta hai — material maangne se le kar finished maal bech kar paisa milne tak. "Aage kya baaki hai" wale zyadatar items sirf tab chahiye jab company mid-size ho jaaye ya khaas industry ki ho.

Ye guide non-technical version hai. Developer / setup ke liye alag detailed handbook hai jisme har cheez ka technical layout, data aur test coverage diya hai. Nayi feature chahiye to roadmap section mein number mark karke ye file wapas share kar do.
